- Regulatory Review
- Construction Management and Inspection

REGULATORY REVIEW

VILLAGE OF GRAFTON, WI

M Squared Engineering (**M²**) is retained on an as-needed basis to provide regulatory reviews for stormwater quality and detention calculations for developers as they approach the Village for permits.

M² staff utilizes software, such as SLAMM, WinSLAMM, P-8, RECARGA, TR-55, HEC-RAS, and TR-20, to review infiltration, evapotranspiration, detention, and storm sewer calculations to ensure that local and state requirements are met.

The Village of Grafton is rapidly developing and the I-43 / Hwy 60 corridor is the focus of a significant amount of new commercial development. This means that stormwater regulation and floodplain management in this area is crucial to the nearby headwaters of Ulao Creek.
