SERVICES & SOLUTIONS

- Conceptual Layout
- Coordination of Wetland Investigation and Survey
- Booster Pump Sizing
- Lift Station Sizing
- Construction Cost Estimate

MEDITERRA

VILLAGE OF KEWASKUM, WASHINGTON COUNTY, WI

M Squared Engineering (**M²**) developed the site plan for this 120-acre residential development in rural Wisconsin. This upscale development will consist of approximately 130 single-family lots ranging in size from one-third to over one-half acres. Part of the development overlooks the Milwaukee River along with much of the surrounding community. This is a unique development for the Village, as well as Washington County.

Environmental corridors with natural wetlands, a 100-foot-high bluff overlooking the Milwaukee River, and 100-year old oak trees surround the site. **M²**'s design preserves all the natural features that make this site unique. **M²** also incorporated a sanitary lift station and water pressure booster pump into the design to accommodate the natural terrain.
