SERVICES & SOLUTIONS

- Topographic Survey
- Roadway Survey
- Utility Survey
- Met Aggressive Timeline

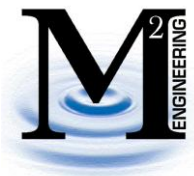

HART PARK ATHLETIC FIELDS CITY OF WAUWATOSA, WI

M Squared Engineering (**M²**) was retained by the City of Wauwatosa to perform a topographic survey for the Hart Park Athletic Fields. The City's very aggressive timeline, coupled with extreme snowfall, required an immediate response from our team. **M²** was proactive in beating this timeline by allowing our staff to work overtime, while staying within budget.

All roadways were surveyed by providing 50-foot cross-sections at 50 foot intervals. Elevations for areas off roadways showed all changes in grade and did not exceed a 50 foot by 50 foot grid. The survey data gathered included building corners, poles, trees (including any new trees of any diameter), fences, pavement, sidewalks, concrete or asphalt pads, tracks or paths, existing athletic courts and fields, and stationary bleachers.

M Squared Engineering finished the project three days ahead of schedule to meet the client's project needs.
